KONERU LAKSHMAIAH EDUCATION FOUNDATION

(Deemed to be University)

Course: Cloud Infrastructure and Services

Course Code: 25CS2206E

PRACTICAL RECORD

Experiment 1(a)

Creating an Amazon Web Services (AWS) Free Tier Account

Name	: Talluri Himabindu Sree
Roll Number	: 2520030484
Department	: Computer Science and Engineering (CSE)
Semester	: Even Semester
Academic Year	: 2026 – 2027

Experiment 1(a): Creating an AWS Free Tier Account

Aim

To create an Amazon Web Services (AWS) Free Tier account, complete the account verification, and confirm that the AWS Management Console can be accessed.

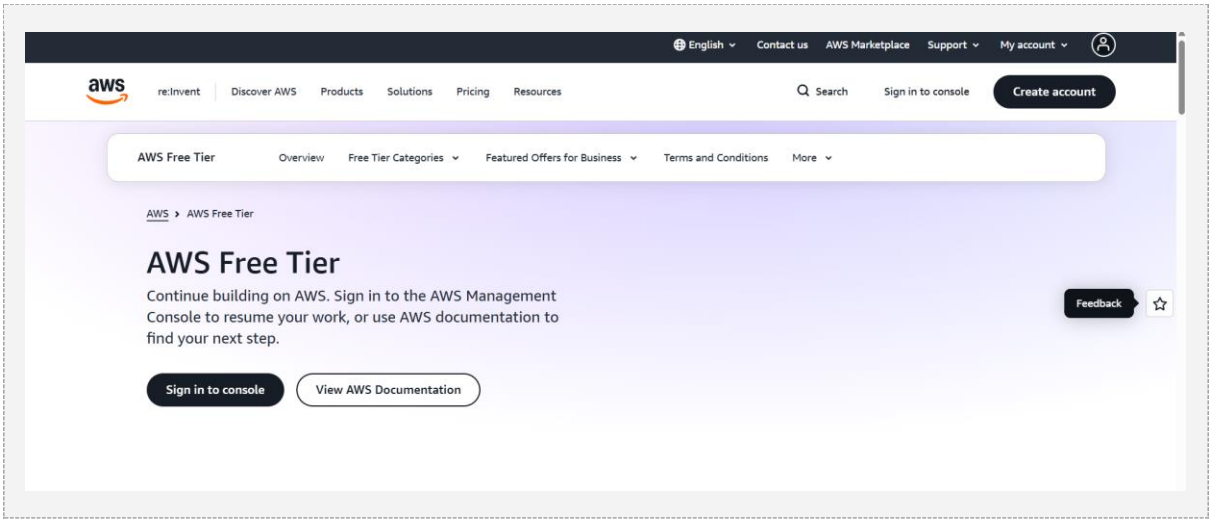

Requirements

- A computer with an internet connection and a web browser
- A valid email address and a mobile number that can receive SMS
- A debit/credit card or UPI for payment verification
- An Aadhaar-based document for identity verification (India)

Procedure

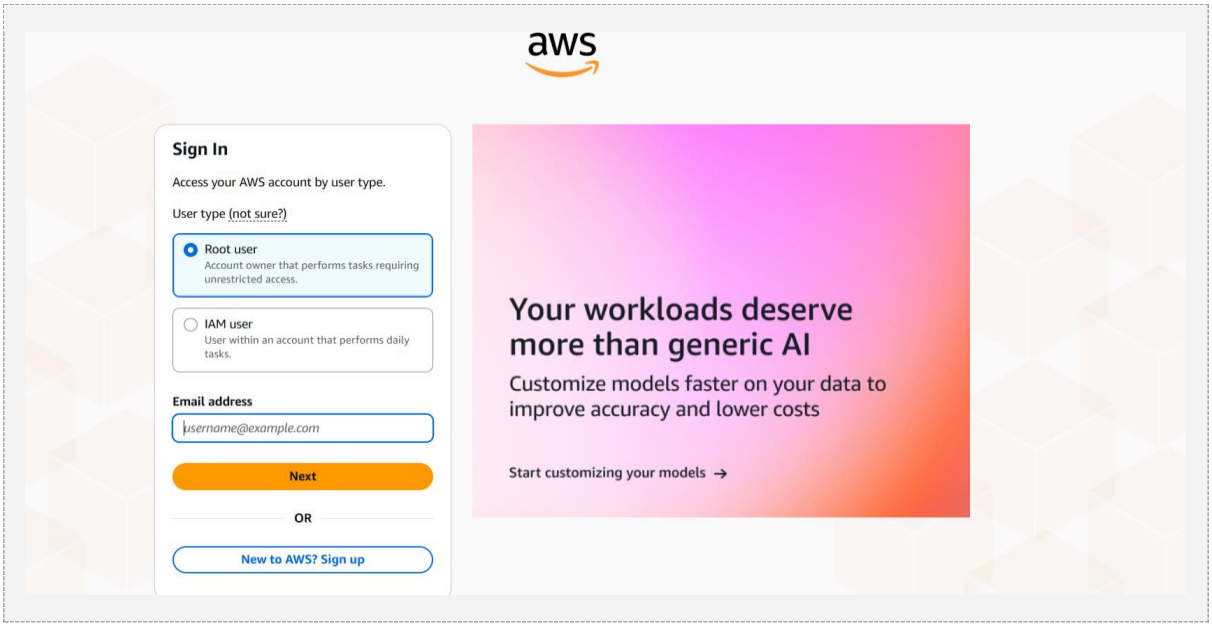

Step 1: Open the AWS website

I opened a browser and went to aws.amazon.com/free. On the AWS Free Tier page I clicked Sign in to console, and then chose Create a new AWS account.

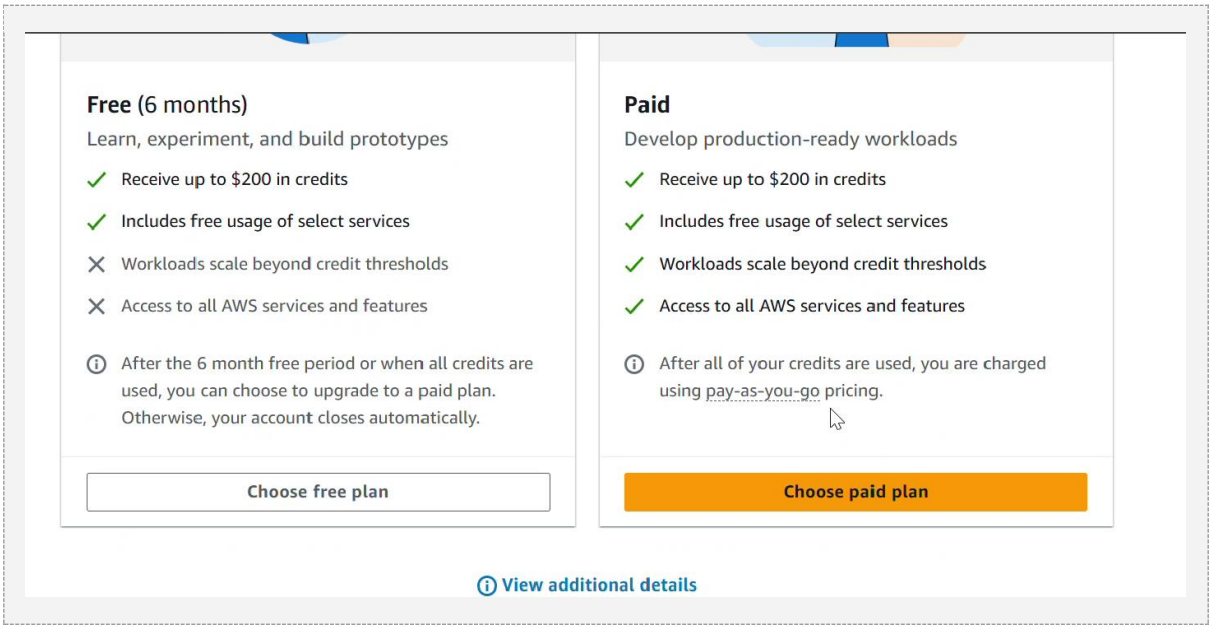

Step 2: Enter the sign-up details

I entered my email address and chose an AWS account name (Sky is the Limit). AWS sent a verification code to my email, which I entered to confirm the address. Then I set a password for the root user.

Step 3: Choose the Free plan

AWS offers a Free plan (6 months, up to $200 in credits) and a Paid plan. As this account is for learning and lab work, I selected Choose free plan.

Step 4: Fill in contact and payment details

I entered my full name, phone number and address, and accepted the customer agreement. Then I added a payment method (card or UPI) which AWS uses only to verify the account.

Step 5: Complete identity verification

AWS asked me to confirm my identity. I selected the purpose of the account as Academic and the ownership type as Individual, and verified my name and address using my Aadhaar document. The overall, name and address verification statuses all show Verified.

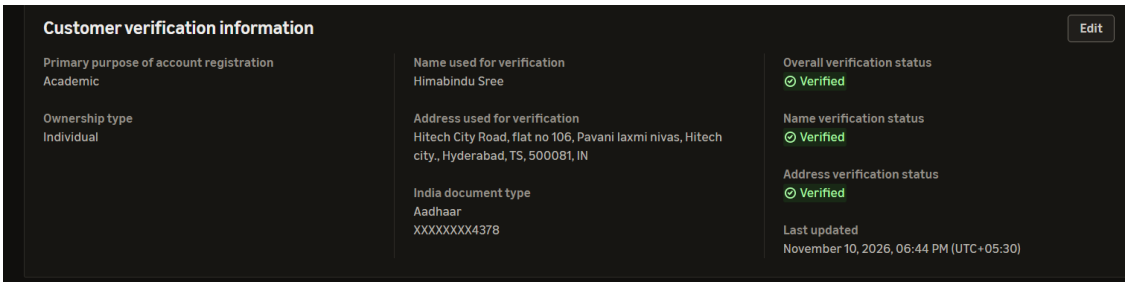

Figure 1: Customer verification information – status Verified

Step 6: Verify the mobile number

AWS sent an SMS code to my mobile number. I entered the code to finish the phone verification.

Step 7: Account is created

After the verification steps, AWS set up the account in a couple of minutes and I was able to sign in. The AWS profile menu shows that I am signed in with my account.

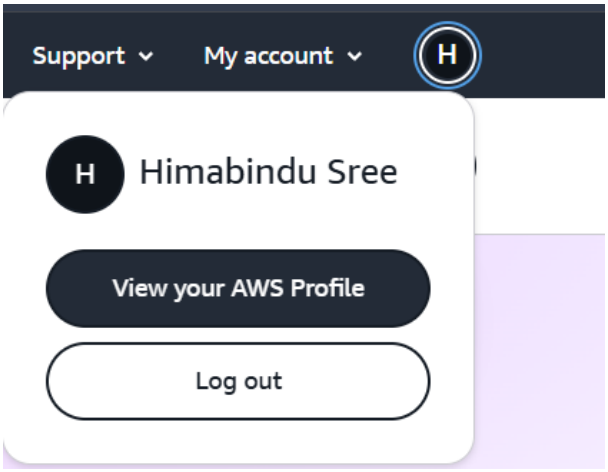

Figure 2: Signed-in AWS account (profile menu)

Step 8: Open the AWS Management Console

I signed in to the AWS Management Console and opened the IAM service from the search bar. The IAM users page loaded and my name is shown at the top right, so the console is working for my account.

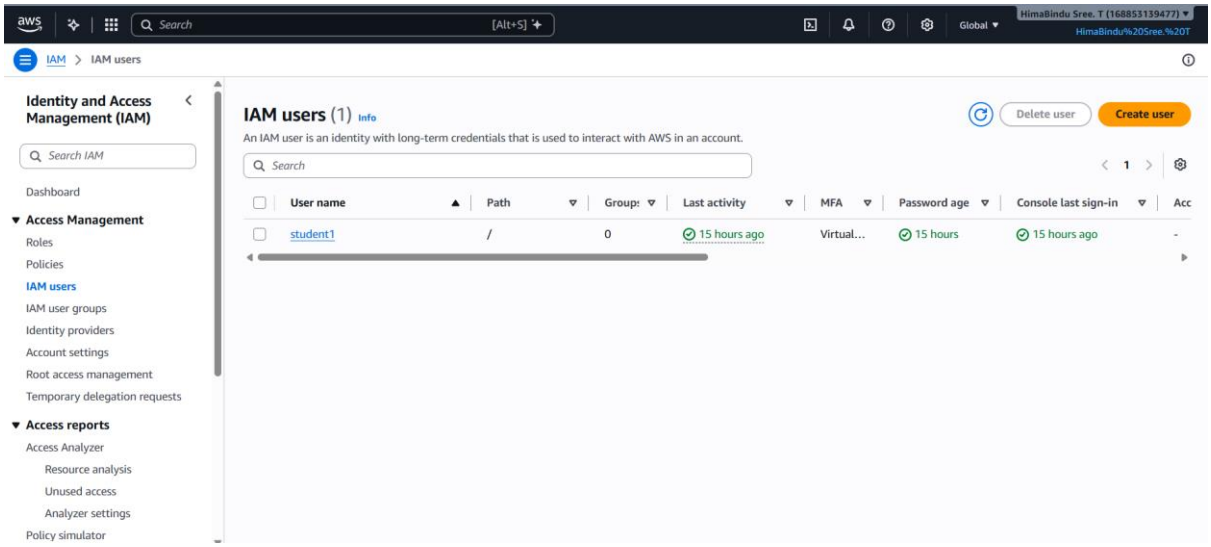

Figure 3: AWS Management Console – IAM service page

Step 9: Check the Free plan status

From the account menu at the top right, I checked the account details. The Free plan status shows the credits remaining ($100 USD) and the days remaining (182 days).

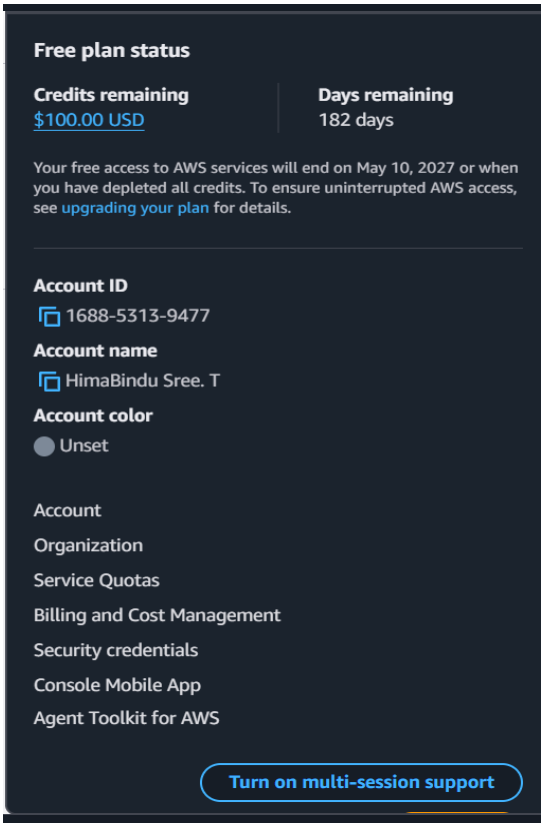

Figure 4: Free plan status – credits and days remaining

Verification

- The AWS Management Console opens after sign-in (Figures 2 and 3).

- My name and account name are shown in the top-right corner of the console.
- Name, address and overall verification are marked Verified (Figure 1).
- The Free plan with its credits and remaining days is active (Figure 4).

Result

The AWS Free Tier account was created successfully, the identity verification was completed, and the AWS Management Console can be accessed with the new account.
